Sessions and Tracks

Track 1: Surgery and its Specialties

Surgery is surgical specialty which focuses on abdominal contents in the body. General surgeons not only perform surgeries for a wide range of common ailments, but are also capable and responsible for patient care before, during, and after surgery. The surgeons organize diagnosis and provide the preoperative and post-operative care to patients and are often responsible for the comprehensive management of the traumatic and the critically ill patient.

Track 2: Ocular Surgery

Ophthalmology is a part of medicine and medical procedure which manages the analysis and treatment of eye issue. Ocular surgery is medical procedure performed on the eye or its adnexa, regularly by an ophthalmologist. The eye is a very fragile organ, and requires extraordinary consideration before, during, and after a surgical procedure to minimize further damage. An eye specialist is responsible for selecting the proper surgery for the patient, and for taking the necessary safety measures. Today it keeps on being a broadly polished sort of medical procedure, having created different methods for treating eye issues. Ophthalmologists are permitted to utilize prescriptions to treat eye illnesses, execute laser treatment, and perform medical procedure when required.

Track 3: Otorhinolaryngology Surgery

Otorhinolaryngology also known as otolaryngology could be a careful subspecialty inside medication that manages states of the Ear, Nose, and Throat (ENT) and related structures of the head and neck. They are normally named as ENT physicians. Doctors who focus on this area are known as otolaryngologists, ENT doctors, ENT surgeons, or head and neck surgeons. Patients ask for treatment from associate specialist for diseases of the ear, nose, throat, base of the bone, and for the surgical management of cancers and benign tumors of the top and neck.

Track 4: Aesthetic medicine and plastic surgery

The exciting field of Aesthetic Medicine is another trend in modern medicine. Aesthetic medicine is an expansive term for specialties that emphasis on improving cosmetic appearance through the treatment of conditions including skin laxity, liver spots, wrinkles, excessive fat, scars,

and skin discoloration. Aesthetic medicine incorporates surgical and non-surgical and experts may use a blend of both. Aesthetic medicine contains every medical procedure that is planned for improving the physical appearance and fulfillment of the patient, utilizing non-invasive to insignificantly in invasive cosmetic procedures. Some Aesthetic Medicine procedures are performed under local anesthesia while a few methods don't require anesthetics by any stretch of the imagination. Plastic surgery is a reconstructing or repairing parts of the body by the transfer of tissue, either in the treatment of injury or for cosmetic reasons. It can be differentiated into two main divisions: reconstructive and cosmetic surgery. Reconstructive surgery includes craniofacial surgery, hand surgery, microsurgery, and the treatment of burns. While reconstructive surgery intends to reproduce a part of the body or improve its functioning, cosmetic surgery aims at improving the appearance of it. Both of these techniques are utilized throughout the world.

Track 5: Endocrine Surgery

Endocrine surgery could be a sub-specialty that specializes in diseases of the thyroid, endocrine, and adrenal glands. Endocrinologists generally work closely along to produce the foremost advantageous care to patients afflicted with endocrine disorders. To be recognized as endocrine surgeon you have got to devote a significant portion of your surgical apply to endocrine disorders and have performed major endocrine operations. Though there has traditionally been a divide between medical and surgical approaches to disease management, the comparatively new specialty of endocrine surgery merges technical experience with operating knowledge of the physiological changes related to endocrine excess and deficiency.
